Arif Almishrafi

CAREER OBJECTIVE

Aspiring Artificial Intelligence Engineer with hands-on academic experience in machine learning algorithms, computer vision, and data analysis. Committed to leveraging technical expertise and a problem-solving mindset to contribute meaningfully to AI-driven teams and forward-thinking technology organizations.

EDUCATION

Bachelor Of Artificial Intelligence,
University of Hail

(2021-2026)
Hail, Saudi Arabia

EXPERIENCE

Data Science Intern

(Jun 2025 – Jan 2026)

Center of LEGAL Studies & Research

Riyadh, Saudi Arabia

Worked as a Data Science Intern contributing to the development of a full-stack Procurement Dashboard (Purchase Analysis), transforming raw purchasing data into actionable business insights for supply chain and finance decision-making.

Developed and maintained the React.js frontend with interactive charts and dynamic filters for procurement data exploration, while building RESTful API endpoints using C#.NET to handle business logic and data validation. Applied Python with Pandas and NumPy for data cleaning, manipulation, and preprocessing to ensure accurate reporting. Designed an integrated data pipeline connecting all system layers, delivered exportable analytics reports for management, and collaborated using GitHub for version control and code review workflows.

PROJECT

AI-Powered Safety Monitoring System for Construction Sites

Developed an intelligent real-time safety monitoring system aimed at reducing workplace accidents and improving compliance on construction sites. The system automatically detects safety violations — such as missing helmets, vests, or unauthorized access to danger zones — without requiring manual supervision.

- Trained and fine-tuned a YOLO (You Only Look Once) deep learning model to detect workers, safety equipment, and violations in real time from video feeds and camera streams.
- Built an end-to-end AI pipeline using Python for model training, data preprocessing, inference, and result processing.
- Used OpenCV for video stream processing and frame-by-frame object detection with bounding boxes and confidence scores.
- Developed an interactive monitoring dashboard using Streamlit, providing site managers with live violation alerts, logs, and safety compliance statistics.
- Designed the system for non-technical users, enabling easy deployment and real-time monitoring without engineering overhead.
- Implemented historical data logging for safety audits, trend analysis, and reporting.

Purchase Analysis & Procurement Dashboard

Designed and developed a comprehensive full-stack Procurement Dashboard that enables organizations to track, analyze, and visualize purchasing data in real time. The system transforms raw procurement data into meaningful business insights to support strategic decision-making across supply chain and finance departments.

- Built an interactive frontend using React.js with dynamic charts and filters for exploring procurement trends by supplier, category, date, and cost.
- Developed a robust backend using C#.NET to handle business logic, data validation, and RESTful API endpoints.
- Used Python (Pandas, NumPy) for data manipulation, cleaning, and preprocessing to ensure accurate analysis and reporting.
- Integrated a seamless data pipeline connecting the Python processing layer with the C#.NET API and React frontend.
- Managed source control, branching, and collaborative development workflows using GitHub.
- Delivered exportable reports and KPI dashboards for procurement teams and management.

COURSES AND CERTIFICATION

- Supervised Machine Learning: Regression and classification
- Advanced Learning algorithms
- Unsupervised Learning, Recommenders, Reinforcement Learning
- Datacamp - Data Manipulation with pandas
- Datacamp - Exploratory Data Analysis in Python

SKILLS

- Programming Languages: Python, Java, C#
- Machine Learning & Neural Networks & Deep Learning
- Data Analysis
- Databases: PostgreSQL, MySQL, Oracle Database, SQLite
- Soft Skills: Problem-solving, Communication, Teamwork, Quick Learning, Adaptability
